DESCRIPTION OF STREAM CONDITION PRIOR TO LAND RECLAMATION COMMISSION PERMITTING (BY APPLICANT OR PRIOR OPERATOR), INCLUDING BANK CONDITION, BANK VEGETATION AND WATER QUALITY.

The area to be mined involves a one mile stretch of FOX Creek NORTH OF HWY 14 (See Map A). This section of the creek is bordered by agricultural operations (cropland and pasture). A narrow width of trees borders each side of the creek. The banks are steep, but well vegetated. Water quality in creek is good to excellent.

DESCRIBE METHODS USED TO REDUCE DAMAGE TO STREAM BANKS, SUCH AS PROTECTING BANK VEGETATION, IF APPLICABLE.

Excavations between the stream banks will be managed such that water flow is not redirected toward the stream banks. A twenty-five-foot width of gravel will be left undisturbed between the operation and streambank vegetation.

DESCRIBE METHODS USED TO REDUCE DAMAGE TO STREAM ENVIRONMENTS, SUCH AS KEEPING ACTIVE MINING OPERATIONS ON GRAVEL BARS, RATHER THAN IN FLOWING WATER, AND KEEPING HAUL ROADS AWAY FROM FLOWING WATER, IF APPLICABLE.

Gravel removal will be restricted to the exposed portions of gravel (gravel bars). We will shave the tops of the gravel bars to a depth no deeper than the normal water level. This will avoid causing erosion of the streambank and channel at the mining site and upstream (headcutting). Although we must cross the stream to access the gravel bar, we will always cross the creek at the same place.
